# Polymer Concrete Flat Top

Used with a  
NoVault™  
Pump Station

## Flat Top Options

NV2 Polymer Flat Top 60 in. Wet Well	#2100001
NV2 Polymer Flat Top 72 in. Wet Well	#2100002
NV2 Polymer Flat Top 96 in. Wet Well	#2100003
NV3 Polymer Flat Top 72 in. Wet Well	#2100004
NV3 Polymer Flat Top 96 in. Wet Well	#2100005
NV3 Polymer Flat Top 108 in. Wet Well	#2100006
NV3 Polymer Flat Top 120 in. Wet Well	#2100007

## Physical Properties

Compression Strength: 18,000 psi

Tensile Strength: 3,500 psi

E Modulus:  $4.5 \times 10^6$  psi

Density: 0.084 lbs/ci

Thermal Expansion:  $7.6 \times 10^{-6}$  in/in/F

Maximum Working  
Temperature: 250 °F

## Description

Polymer concrete flat tops provide a stable pre-engineered pump station base. Standard sizes for common wet well diameters are precision cast to provide corrosive resistant bases for lift station equipment. Custom sizes are available as needed for special applications. The polymer concrete composite is a precise formulation of high purity quartz aggregates graded and finely sized, mixed with high strength epoxy resin. Composite is 90% to 94% quartz aggregate.

## Benefits

- Precision cast to provide flat and stable base for pump station enclosures
- Chemical and weather resistant
- Wet well hatches and pipe penetrations are cast in, eliminating the need for field laid out
- Suitable for use with precast concrete, HDPE and fiberglass wet wells.
- Integrated cord management trough for neat pump installation
- Safety grates included in all hatch locations

## Quality Assurance

Manufacturer has over 20 years of experience and guarantees parts will meet all applicable specification when installed and used properly. All casting are dry fit and quality checked prior to delivery.
